nucleic acids encoding alpha 2 macroglobulin or a cell expressing such, classified in class 530, subclass 350, for example.

- VIII. Claims 94-95, are drawn to a kit comprising chromatography columns with alpha2 receptor ligand, classified in class ***, subclass ***.
- IX. Claims 50-54, are drawn to a method of identifying alpha2M receptor fragments that bind HSP, classified in class 435, subclass 7.1.
- X. Claims 55-59, are drawn to a method of identifying HSP fragments, classified in class 435, subclass 7.1.
- XI. Claims 60-62, are drawn to methods of identifying molecules that bind to alpha2M receptor, classified in class ***, subclass ***.
- XII. Claims 63-71, are drawn to methods of identifying compositions that modulate binding of alpha2M to alpha2M receptor, classified in class ***, subclass ***.
- XIII. Claims 72-73, are drawn to a method of identifying a compound that modulates antigen presentation, classified in class ***, subclass ***.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions V-VIII are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions differ from one another as follows: the different products are structurally and functionally different from each other, and have different uses. The recombinant cells can be used not only to make the complexes but also

directly as immunogens or for in vitro cellular studies. Thus the products are distinct and independent from each other.

- Inventions I-IV and IX-XIII are unrelated. Inventions are unrelated if it can be 3. shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions differ from each one another as follows: The different methods are drawn to different method steps, different endpoints, and different reagents for performing the steps. Each of these methods are distinct and independent
- The products of group V-VIII are drawn to different types of inventions than te 4. methods of group I-IV and IX-XIII.
- Because these inventions are distinct for the reasons given above and have 5. acquired a separate status in the art as shown by their different classification, and/or different search requirements and/or recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- Due to the complexity of the claims and the number of groups, a written 6. restriction is being sent out. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
